

OVERVIEW

A practical DataComms course allowing installation engineers to understand the theoretical & practical requirements of a computer based Data Network. We aim to make ALL our courses as practical as possible, leading to 'real world' skills and not just theoretical skills.

Data Communications Cabling — Copper

A five-day comprehensive training course covering the fundamentals of installation, termination & testing of copper based data communications systems CAT cabling.

Fibreoptic Installation & Testing — Multimode

A five-day comprehensive training course covering the fundamentals of multimode Optical Fibre installation, termination & testing.

Fibreoptic Installation & Testing — Singlemode

A five-day comprehensive training course covering the fundamentals of singlemode Optical Fibre installation, termination & testing.

Structured Cabling Installation

A two-day hands-on training course covering the latest techniques required to successfully install structured cabling currently utilised for LANs.

Fibreoptic Termination

A two-day intensive training course which aims to provide installation engineers and supervisors with sufficient knowledge to competently, terminate and test optical fibre connectors and network infrastructures.

COST: £175 (+ VAT) Per Day

PREREQUISITE: None

DURATION: 2-5 Days
