

DOMESTIC ELECTRICAL INSTALLER QUALIFICATION

We are providing a training course to help electricians and others outside the industry to get prepared for Part P of the building regulations. With the advent of Part P, the NICEIC, ECA and Corgi have decided to collaborate and provide a modular training course which is now a national qualification for domestic installers.

The course covers the scope of work to become competent for electrical work within a dwelling. It's extensive, but the modular structure allows for those already in the industry, such as competent but unqualified electricians, to pick and choose the sections they are not up to date with. Similarly, those with no qualifications at all can take the full course. The course is aimed at candidates with no formal qualifications to bring them in line with the building regulations and become domestic installers.

COURSE OBJECTIVE

This course is suitable for those persons carrying out electrical work in dwellings who have no formal qualifications and seek to register to self certify their work to meet the requirements of the Building Regulations.

COURSE CONTENT

- **Applicable Building Regulations**
- **Electrical Safety legislation, regulations standards and terminology**
- **Pre work survey/inspection**
- **Safe isolation procedures**
- **Identification of unsafe electrical situations**
- **Earthing and bonding requirements**
