

# INDUSTRIAL ELECTRICAL MAINTENANCE

# IND-TE

## OVERVIEW

This comprehensive course is aimed at experienced non-electrical personnel and people wishing to up skill or re-train. It will provide a level of competence, which will allow work to be safely and efficiently carried out on Electrical Equipment and Systems, with the emphasis being placed on a pro-active approach. The course can where necessary be adapted to relate to your own plant and equipment.

## AIMS

The aim of the course is to provide solid foundations upon which the participant will be able to build and develop. Emphasis is given to providing the necessary skills, which will allow the participant to carry out routine electrical tasks. It is also made clear that a participant needs to identify and know their own limitations, allowing tasks to be carried out in a safe manner, not giving rise to danger.

## CONTENT

The course is split into three modules enabling the candidate to join the course at the appropriate level and attend the course over a period of time to suit themselves.

The course is also offered as a '**Total Package**' which is inclusive of the three modules.

**Basic Electrical Generic Module – MOD-01**
