

PRO-ACTIVE MAINTENANCE

A one-day intensive course for engineers aiming to identify the areas of your plant which require the allocation of your maintenance delivery function, and those which don't, enabling you to break-out of that seemingly endless cycle of breakdowns.

OVERVIEW

With the reduction in engineering staffing levels to a minimum, to ensure you remain as competitive as possible in the market place, it becomes absolutely vital that companies effectively allocate their remaining staff to maximise plant up-time.

Sounds simple, but in essence when you get caught in that downward spiral of reactive maintenance 'fire fighting' it becomes increasingly difficult to remain focused.

THE COURSE COVERS

- **Why we need Planned Preventative Maintenance**
- **Plant Prioritisation**
- **Critical Route Planning**
- **Data Collection**
- **Data Analysis**
- **Pareto Analysis**
- **Application of Tools**
- **PPM Software**

COST: £225 (+ VAT)
