

C&G 2372 - CERTIFICATE IN INSTALLING & TESTING DOMESTIC PHOTOVOLTAIC SYSTEMS

PVI001

Certificate in Installing & Testing Domestic Photovoltaic Systems - City & Guilds 2372

This City & Guilds 2372 Certificate is intended for qualified electricians who want to install grid connected domestic photovoltaic systems that are either integrated into, or retro fitted onto, a domestic property. It is concerned with domestic systems installation within prescribed specifications and therefore does not cover design or glazed or curtain wall systems.

It is expected that candidates will be practicing electricians and have appropriate qualifications related to electrical installation, knowledge of the IEE Wiring Regulations and inspection and testing. The award is designed to offer specific skills and knowledge to electricians to ensure they are conversant with the Regulations and Codes of Practice related to PV systems. The Department of Trade and Industry (DTI) supports the recognition of qualified personnel within this initiative and sees PV systems as an essential part of the Government energy policy.

The topics covered during the course include the following:

- **Photovoltaic systems**
- **Standards and Regulations/Guidelines and Codes of Practice**
- **Safety**
- **PV system components**
- **Approvals**
- **Installations**
- **Commissioning and testing**
- **Customer care**

Course certification is awarded upon successful completion of both the written and practical assessments, this certificate can then be used as evidence of your training and ability to install and commission PV systems.

COST: £775 (+ VAT)

PREREQUISITE: As Per The Overview

DURATION: 5 Days

BOOKINGS: Telephone 01246 810444 or Email enquiries@techniquetraining.co.uk
